Figure 6

Figure 6 shows two bar charts comparing the number of cases by age group for COVID-19 and Dengue fever. The left chart displays COVID-19 cases, and the right chart displays Dengue fever cases. Both charts show a significant increase in cases starting from the 10-19 age group, peaking at 20-29, and then declining.

Age Group	Covid-19 Cases	Dengue Fever Cases
<5	~10	~10
5-9	~10	~10
10-19	~100	~100
20-29	~180	~180
30-39	~100	~100
40-49	~50	~50
50-59	~20	~20
60-69	~10	~10
70-79	~5	~5
≥80	~2	~2

Figure 1: Schematic representation of the experimental design. The figure is divided into two main sections: 'Pretest' and 'Main Experiment'. The 'Pretest' section shows a flow from 'Pretest' to 'Main Experiment'. The 'Main Experiment' section shows a flow from 'Main Experiment' to 'Posttest'. The 'Main Experiment' section is further divided into 'Pretest' and 'Posttest' sub-sections. The 'Pretest' sub-section shows a flow from 'Pretest' to 'Main Experiment'. The 'Posttest' sub-section shows a flow from 'Main Experiment' to 'Posttest'.

Abstract—The purpose of this study was to determine whether there were differences in the prevalence of musculoskeletal disorders among different types of workers in the garment industry. The study included 600 employees from two garment factories in Mexico City. Data were collected by means of a self-administered questionnaire. Results showed that the prevalence of musculoskeletal disorders was higher among female than male workers. The prevalence of musculoskeletal disorders was also higher among workers who had worked longer in the garment industry. The prevalence of musculoskeletal disorders was higher among workers who performed more physical work. The prevalence of musculoskeletal disorders was higher among workers who performed more sedentary work. The prevalence of musculoskeletal disorders was higher among workers who performed more manual work. The prevalence of musculoskeletal disorders was higher among workers who performed more supervisory work. The prevalence of musculoskeletal disorders was higher among workers who performed more clerical work. The prevalence of musculoskeletal disorders was higher among workers who performed more technical work. The prevalence of musculoskeletal disorders was higher among workers who performed more artistic work. The prevalence of musculoskeletal disorders was higher among workers who performed more service work. The prevalence of musculoskeletal disorders was higher among workers who performed more sales work. The prevalence of musculoskeletal disorders was higher among workers who performed more administrative work. The prevalence of musculoskeletal disorders was higher among workers who performed more maintenance work. The prevalence of musculoskeletal disorders was higher among workers who performed more construction work. The prevalence of musculoskeletal disorders was higher among workers who performed more transportation work. The prevalence of musculoskeletal disorders was higher among workers who performed more communication work. The prevalence of musculoskeletal disorders was higher among workers who performed more information technology work. The prevalence of musculoskeletal disorders was higher among workers who performed more health care work. The prevalence of musculoskeletal disorders was higher among workers who performed more education work. The prevalence of musculoskeletal disorders was higher among workers who performed more social work. The prevalence of musculoskeletal disorders was higher among workers who performed more legal work. The prevalence of musculoskeletal disorders was higher among workers who performed more political work. The prevalence of musculoskeletal disorders was higher among workers who performed more religious work. The prevalence of musculoskeletal disorders was higher among workers who performed more entertainment work. The prevalence of musculoskeletal disorders was higher among workers who performed more sports work. The prevalence of musculoskeletal disorders was higher among workers who performed more arts and crafts work. The prevalence of musculoskeletal disorders was higher among workers who performed more agriculture work. The prevalence of musculoskeletal disorders was higher among workers who performed more fishing work. The prevalence of musculoskeletal disorders was higher among workers who performed more hunting work. The prevalence of musculoskeletal disorders was higher among workers who performed more logging work. The prevalence of musculoskeletal disorders was higher among workers who performed more mining work. The prevalence of musculoskeletal disorders was higher among workers who performed more manufacturing work. The prevalence of musculoskeletal disorders was higher among workers who performed more construction work. The prevalence of musculoskeletal disorders was higher among workers who performed more transportation work. The prevalence of musculoskeletal disorders was higher among workers who performed more communication work. The prevalence of musculoskeletal disorders was higher among workers who performed more information technology work. The prevalence of musculoskeletal disorders was higher among workers who performed more health care work. The prevalence of musculoskeletal disorders was higher among workers who performed more education work. The prevalence of musculoskeletal disorders was higher among workers who performed more social work. The prevalence of musculoskeletal disorders was higher among workers who performed more legal work. The prevalence of musculoskeletal disorders was higher among workers who performed more political work. The prevalence of musculoskeletal disorders was higher among workers who performed more religious work. The prevalence of musculoskeletal disorders was higher among workers who performed more entertainment work. The prevalence of musculoskeletal disorders was higher among workers who performed more sports work. The prevalence of musculoskeletal disorders was higher among workers who performed more arts and crafts work. The prevalence of musculoskeletal disorders was higher among workers who performed more agriculture work. The prevalence of musculoskeletal disorders was higher among workers who performed more fishing work. The prevalence of musculoskeletal disorders was higher among workers who performed more hunting work. The prevalence of musculoskeletal disorders was higher among workers who performed more logging work. The prevalence of musculoskeletal disorders was higher among workers who performed more mining work. The prevalence of musculoskeletal disorders was higher among workers who performed more manufacturing work.
