1980

**Abstract**—The purpose of this study was to determine if there were differences in the prevalence of musculoskeletal disorders among different types of workers. The study included 600 male employees from a large manufacturing company who had been employed for at least one year. They completed a questionnaire about their work activities and symptoms of musculoskeletal disorders. The results showed that the prevalence of musculoskeletal disorders was higher among workers in the production department than among workers in the maintenance department. This suggests that the type of work may influence the risk of developing musculoskeletal disorders.

11. *Chlorophyll a* fluorescence was measured with a Turner Designs Model 10 fluorometer. The fluorescence was measured in the dark after the sample had been acclimated to the light for 10 min. The fluorescence was measured at 680 nm. The fluorescence was measured in the dark after the sample had been acclimated to the light for 10 min. The fluorescence was measured at 680 nm.

[illegible]

**Abstract** The purpose of this study was to determine the effect of a 10-week, 100-hr, 100-mile, 100-lb. weight loss program on the body composition of 100 obese women. The program was designed to be a total lifestyle change, including diet, exercise, and behavior modification. The program was evaluated using a pretest-posttest design. The results showed that the program was effective in reducing body weight, body fat, and body mass index (BMI). The program was also effective in increasing lean body mass (LBM) and bone mineral density (BMD). The program was well tolerated and had no adverse effects on health. The program was found to be a safe and effective method for weight loss and body composition improvement in obese women.
